

PROJECT NAME: Eagle Mountain CUP Waterline Project, Phase 1

RECIPIENT: Eagle Mountain City

LOCATION: Eagle Mountain, Utah

PURPOSE: Eagle Mountain City is in the process of purchasing the right to use up to 10,000 acre feet of water from the Central Utah Water Conservation District. This line will provide a connection to a point on the system to be installed by Central Utah, and allow the City to have access to this water. Costs for this project include a 21 inch ductile iron water line to be installed from the point of connection to a reservoir location within the City. Costs also include the construction of a 5.0 million gallon reservoir within the City, and a booster station to pressurize this water to accommodate the city's pressure zone.

First, performance of a preliminary design for the projects. Second, performance of an environmental study. The City would use our matching funds for these tasks, as usually the FONSI is required after the environmental study before funding is released to the City. Once that has been received, the City will continue with the final design of the facilities. The funding would be used, along with the remaining balance of the City's contribution, for the construction and installation of the project.

Eagle Mountain City is located predominantly within the Cedar Valley area, with no surface water. The Utah State Engineer currently has a moratorium issued for water rights within the Cedar Valley, and as such, growth cannot continue without additional sources of water being identified. This water line project will allow the City to purchase and to use water rights owned by the Central Utah Water Conservatory District, so that the district can use water rights they own outside of the valley to deliver water to our system, which is in turn delivered to the residents.

This project will allow Eagle Mountain to secure water for future growth. Eagle Mountain does not have access to any new ground water and must purchase new supplies from the Central Utah Water Conservation District. This new Pipeline will deliver the water to Eagle Mountain, will sustain growth, insure Eagle Mountain's water supply and create jobs.

AMOUNT: \$1,000,000
